

# Super Admin Guide

Step by step: approve grades, decide corrections, manage Admin accounts, reopen a semester and read the audit log.

For Super Admins (VPAA and IT)

## Your menu

### ACCOUNTS

Dashboard

Admin accounts

Audit log

### STUDENTS

Student Listing

Transcripts

### ACADEMIC

Academic calendar

Course offerings

### GRADES

Grade submission review

Grade corrections

NG to settle

Semester export

## Good to know

You are the **second pair of eyes**. Admins enter grades; **nothing reaches students until you approve it**.

At least **one active Super Admin** must always exist. The system refuses to disable the last one.

You can **look at** students, plans and offerings, but the day-to-day editing belongs to the Admins.

Everything you decide is recorded with your name in the **audit log**.

## Find your task

### 1 Approve a class's grades

Grades ► Grade submission review

### 3 Create, disable or enable an Admin account

Accounts ► Admin accounts

### 5 Read the audit log

Accounts ► Audit log

### 2 Decide a grade correction

Grades ► Grade corrections

### 4 Move a semester forward, or reopen a closed one

Academic ► Academic calendar ► Semesters table

### 6 Download a whole semester

Grades ► Semester export

1

## Approve a class's grades

Check what an Admin submitted and publish it to the students.

WHERE

Grades &gt;

Grade submission review

Whenever the dashboard shows submissions waiting

1

### Open the review queue

Each line shows a class and how many grades are **undecided**.

Click **Review** on the class you want.

2

### Read the table

Columns: **Student** **Grade**  
**Status** Look for anything that seems wrong.

3

### Choose who to decide

Tick rows to decide **only those**.  
 Tick none to decide the **whole class**.

4

### Approve

Click **Approve checked (or all, if none checked)**.

The grades are published and GPAs update.

5

### Or reject

Type the **Reason for rejection** (required), then click **Reject checked (or all, if none checked)**.

The grades return to the Admin as drafts.

6

### Done

The class leaves the queue when nothing is left undecided. Others show "(partially decided)".

### WHERE YOUR DECISION SENDS A GRADE

Submitted

By the Admin

Approve

Published, students see it

Reject

Back to Draft with your reason

A submission is decided **only once**. After approval, a grade changes only through a **correction request** (next task).

2

## Decide a grade correction

Approve or refuse a change to a grade that is already published.

WHERE

Grades &gt;

Grade corrections

When a correction is pending

1

### Open Grade corrections

Scroll to **Pending correction requests**. An empty list says "No corrections awaiting a decision".

2

### Compare

Each request shows the **old grade**, the **new grade** and the Admin's **reason**.

3

### Approve

Click **Approve**. The grade, the student's GPA and the transcript update at once.

4

### Or reject

Type a **Note** and click **Reject**. Nothing changes for the student.

Admins cannot approve their own requests; the decision is yours alone.

A request cannot be decided twice: the page answers "This request is already APPROVED".

## 3

## Create, disable or enable an Admin account

Give a new colleague access, or remove it the moment someone leaves.

WHERE

Accounts

Admin accounts

When staff join or leave

1

### Open the form

On **Admin accounts** find **Create Admin / Super Admin account**.

2

### Fill it in

**Username** **Display name**  
and **Role** (Admin or Super Admin).

3

### Create

Click **Create account**. A green box shows the **temporary password** once.

4

### Hand it over

Give the password to the person directly. At first sign-in they must choose their own (at least 10 characters for staff).

5

### Disable when needed

In **Existing accounts**, click **Disable** in the Action column. They are locked out **immediately**, even if signed in.

6

### Enable again

Click **Enable** on a disabled account to give access back.

The temporary password is shown **once**. If it is lost, create a new account or ask IT to reset it.

You cannot disable the **last active Super Admin**. Create another one first.

## 4

## Move a semester forward, or reopen a closed one

Start or end a term, and undo a Close when something was missed.

WHERE

Academic

Academic calendar

Semesters table

Term start, term end, or a rare correction

1

### Find the semester

In the **Semesters** table look at the **Change state** column.

2

### Choose the next state

In **Move to** pick the next state. For a Closed semester the only choice is **In Progress (reopen)**.

3

### Reason

Normal moves: a **Reason** is optional for you.

**Reopening always needs a reason**, and it is saved in the audit log first.

4

### Confirm

Click **Change state**, or **Reopen semester** for a reopen.

### WHO MAY DO WHAT

**Draft → Open**

Admin or Super Admin

**Open → In Progress**

Admin or Super Admin

**In Progress → Closed**

Admin or Super Admin

**Closed → In Progress**

Super Admin only, with a reason

Only **one** semester can be In Progress. Close the other one before reopening an old semester.

Creating and deleting semesters stays with the Admins.

5

## Read the audit log

See who did what and when, and what changed.

WHERE

Accounts

Audit log

To investigate or to review a period

1

### Open Audit log

Newest activity is first. Opening the page is itself recorded.

2

### Narrow it down

Use **Action** **Entity type** **Student ID (internal)**  
**From** and **To**, then click **Apply**.

3

### Open an entry

Click **View change** to see the value **before and after**.

4

### Clear the filters

Click **Clear filters** beside **Apply** to start again.

Logins, passwords and temporary passwords are **never** stored in the log. Prints and exports are.

6

## Download a whole semester

Get final grades and results out of the system, as a file or a print.

WHERE

Grades

Semester export

End of term reporting

1

### Open Semester export

The table lists every semester, its students and grades recorded, and **Not yet published** counts.

2

### Pick the file

**Course grades:** one row per student per course (grade, grade point, credit hours). **Semester results:** one row per student (credits, semester GPA, CGPA, standing).

3

### Or print

**Print / PDF** gives a printable version.

A copy of the College's academic data leaves the system with every file. **Each download and print is recorded in the audit log.**

**Locked out of everything?** Another active Super Admin can create or enable your account. Keep at least two Super Admins so this never blocks the College.
